INTRODUCTION

Things are getting better and better. We have modern mobiles , PC's , houses – INVENTIONS. As same as things , school is improving. With furniture , way of teaching and learning , aids and the way of teaching is better and more effective.

SCHOOL SYSTEM THEN

What's the most visible difference between school system now and back then is equipment in classes. People then had basic classes with chairs and desks. They didn't have PC's , notebooks, printers eg.

They didn't have English back then. They could only chose from Russian or German. People back then read more books and they used libraries for researching. Students were often punished physically.

SCHOOL SYSTEM NOW

Studying nowadays is completely different than the one back then. We have modern classes with modern equipment. We have to learn English and choose from one of these languages : Spanish , German , Russian or French.

Students are assigned assigments which are usually completed with the help of an electronic device such as : essays , presentations etc. Students have many opportunities regarding selection of school and studying programme. Some schools allow the usage of mobile phones.

MY OPINION

Unexpectedly , I prefer school system nowadays. I think we have more options , we can say our opinion without expectation that we'll be physically punished . Nowadays we can choose language (sport that we will play on physical education). That's advantage . We are learning work with PC and we are getting better in our hobbies after school.

But I think people back then were more socialised and they had stronger friendships , relationships . But they weren't able to search informations fast.

CONCLUSION

School then and have disadvantages and advantages as everything. Now it's easier and we are learning with fun. My ending is that I wouldn't like to live at that time. Educational system is getting better – and it's more "colorful"

Thanks for reading this presentation , I'm glad that I could write it . Remember , people back then didn't write essays / presentations like now. I wonder how it will looks like in 100 years .

THANKS!!
